

The all year round building system for conservatories and garden buildings

As easy as...

1: install your base

2: attach your wall

3: add the frames of your choice!

Ask yourself the questions 'Why would I want to build my conservatory base and dwarf wall traditionally?', 'Would I want to have mechanical diggers on my lawn or flower beds, pre-mix concrete lorries ruining my drive?', 'Would I want piles of bricks on my garden?'

The Easy Base system is designed to be built during periods of low temperature or difficult weather conditions. This means that you can erect the complete conservatory from the ground up at any time of year, in one continuous process, without worrying about damage caused by wet or cold conditions.

Our system provides the perfect solution to the unpredictability of the British climate, with the installation procedure eliminating the problems experienced when building traditional foundations.

The system is especially suitable for the following types of site conditions:

- Sites with existing drainage pipes and covers, as they do not need to be relocated
- Sites with difficult soil conditions, as there's no need for large scale excavations
- Sites with difficult access (i.e. terraced or linked houses)
- Sites where the ground level to DPC is greater than 150mm
- Sites with mature gardens which need preserving

The system provides a quick and easy way to construct the walls of your conservatory.

- Walls are pre-clad and only require bridging tiles applied on site, plus grouting
- Even before tile application, walls are totally waterproof
- Available in a range of brick finishes, or as plain board for rendering

Just some of the features and benefits of Easy Base systems:

- Custom made to your precise measurements and accurate angles
- Easy to carry and small enough to be taken through the house if necessary
- Perfect for DIY or Professional on-site installation
- Supplied with comprehensive installation instructions
- Complete with a 10 year warranty
- Total indistinguishable from a conventional build
- Requires NO skips to remove spoil, as major earthworks are not required
- Can be fit over existing patios (no need to dig up tons of concrete)
- Manholes and drains can be left in place
- Can be dismantled, with conservatory or garden building, and re-erected elsewhere
- Caters for uneven and sloping sites with ease

Easy Base pre-clad wall panels are available in a range of finishes...

...or as plain board for rendering.

How to order your Easy Base system:

In order to provide an accurate quotation to supply the eze system, we need the following information:

For Bases:

- The style of the base. i.e. rectangular, square, Victorian or P-shaped
- The external brick dimensions of the base (conservatory manufacturer's base plan)
- If there are drains or inspection covers on the site
- The distance between ground level and internal floor level

For Walls:

- The height of the wall above DPC
- The location of the doors and the width of the doors
- The type of finish. i.e. rendered or brick. If brick, then state brick type
