

The complete building system for **Porches**

As easy as...

1: install your base

2: attach required wall or frame

Ask yourself the questions 'Why would I want to build my base and walls traditionally?', 'Would I want to have mechanical diggers at my front door', 'Would I want piles of bricks on my garden?'

The Easy Base system is designed to be built during periods of low temperature or difficult weather conditions. This means that you can erect the complete porch from the ground up at any time of year, in one continuous process, without worrying about damage caused by wet or cold conditions.

Our system provides the perfect solution to the unpredictability of the British climate, with the installation procedure eliminating the problems experienced when building traditional foundations.

3:

The system is suitable for most properties, with no need to disturb your existing paths or frontage.

The system provides a quick and easy way to construct your walls (if required).

- Walls are pre-clad and only require bridging bricks applied on site, plus mortar
- Even before tile application, walls are totally waterproof
- Available in a range of brick finishes, or as plain board for rendering
